TITLE: An integral expression for the remainder term of a formula of the Taylor type for functions of two variables

PERIODICAL: Referativnyy zhurnal. Matematika, no. 1, 1962, 4,  
abstract 1 B 43. (Studii si cercetări mat. Acad. RPR Fil.  
Cluj, 1960, 11, no. 1, 177-183)

TEXT: In the following formula of Taylor type

$$f(x,y) = \sum_{i=0}^n \sum_{k=0}^m \frac{\partial^{i+k}}{\partial x^i \partial y^k} f(a,b) \frac{(x-a)^i (y-b)^k}{i! k!} R(x,y)$$

there is given an integral expression for the remainder term

$$R(x,y) = \int_a^x \frac{(x-t)^n}{n!} \frac{\partial^{n+1} f(t,y)}{\partial t^{n+1}} dt + \int_b^y \frac{(y-t)^m}{m!} \frac{\partial^{m+1} f(x,t)}{\partial t^{m+1}} dt -$$

"Melanoblastosis of the Pia Mater"

Sofia, Nevrologiya, psikiatriya i nevrokhirurgiya, Vol 5,  
No 3, 1966, pp 174-177.

Abstract [Authors' Russian and English summaries, modified]:  
The article describes primary melanoblastosis of the pia  
mater in a finely granulated, diffuse form involving mainly  
the cerebral basic-with metastasis to the basal surface,  
plexus chorioideus and hypophysis. Clinically, a dienceph-  
alic syndrome was observed, focal symptoms, diabetes melli-  
tus, hypertension, etc. The condition had a slow evolution.  
Histological findings demonstrated characteristic perivascular  
arrangement of the cells, which were irregularly pigmented  
with achromatic areas. Oval cells predominated. Fifteen  
references, including 4 Bulgarian, 3 Russian, 1 German, and  
7 Western. (Manuscript received, November 1965).

TITLE: Theory of some multicircuit negative-resistance LC-oscillators

SOURCE: Polska akademia nauk. Bulletin. Serie des sciences techniques, v. 13, no. 9, 1965, 151-154

TOPIC TAGS: electronic oscillator, oscillator theory

ABSTRACT: Conditions of existence of stable self-oscillations in a multicircuit oscillator (see figure) to which an external sinusoidal voltage is applied are considered. The nonlinear negative resistance is denoted by  $R = 1/G$ . Operation of the oscillator is described by a system of differential equations. The equations are solved for a particular case when the external frequency is equal to one of the oscillator natural frequencies. The periodic

solution yields these relations:  $\frac{s_1 \omega_1}{4} A_0^3 - a\omega_1 A_0 - p_1^* = 0$ , where  $A_0$  is a real root; and

Card 1/2

L 06158-67

ACC NR: AP6018136

$$\frac{3s_1}{4} A_0^2 - a < 0,$$
$$2d_p - 2b_p + s_p \left( A_0^2 + \frac{B_0^2}{\omega_i^2} + E^2 \right) < 0 \quad (p = 2, 3, \dots n).$$

These relations are recommended for use in designing multicircuit oscillators.

TITLE	The Production of Morphine and of Its Derivatives from Poppy Pods	
ORIG. PUB.	Farmatsiya (Bulgaria), 8, No 2, 22-26 (1958)	
ABSTRACT	Until recently the only raw material source for the production of morphine (I) was opium. However, the latter is difficult to harvest and requires the use of mechanical equipment. A description of a method for the production of I by the extraction of ground poppy pods with water in diffusion batteries is described. The extract is concentrated by vacuum evaporation and extracted with alcohol (butanol or isopropyl alcohol). The morphine is separated by precipi-

ABSTRACT	:	the use of selective adsorbents, is given. The raw I obtained is dark brown powder containing 50-60% morphine. After further treatment, morphine of 90-92% purity is obtained, containing 1-2% of side alkaloids, 5-6% moisture, and 1% of other substances. The product is fully suitable for the synthesis of codeine, dionine, heroin, etc. The new method for the production of morphine from poppy pods has opened up a rich raw material base for the production of semisynthetic derivatives of morphine.

PERIODICAL: Referativnyj zhurnal, Geofizika, no. 5, 1962, 56, abstract 5B359 (Khidrol. i meteorologiya, no. 6, 1961, 9-15)

TEXT: The question is considered of the determination of the average number of days with thunderstorms on a set route from the data of separate stations. On the route Bozhurishche - Varna an average of 17.1 days is observed during June, but there are 18.4 days with thunderstorms on the route Bozhurishche - Michurin. The graphical relationship is adduced between the number of days with thunderstorms and the radius of the circular area in which they are observed. / Abstracter's note: Complete translation. /

TITLE: New items in casting production technology

PERIODICAL: Tekhnika, no. 6, 1961, 28 - 3!

TEXT: The article briefly reviews certain casting practices little known in Bulgaria which could be applied in existing foundries or be taken into consideration when designing new foundries and working out new technological processes. Alloying of steel with exothermic ferroalloys, such as standard-carbon and medium-carbon ferromanganese and carbon ferrochromium would ensure considerable savings in power and materials. This applies particularly to the Bulgarian production of chromium steels; the present annual production of 6,000 tons is continually increasing. Complex deoxidizing of electric steels would reduce the duration of the deoxidation process. The use of silico-manganese and silico-aluminum not only reduces the

New items in technology...

deoxidation process, but also ensures separation of non-metallic impurities. Modification of cast iron with liquid modifiers in producing thin-walled castings makes for good mechanical properties. Modification and refining of aluminum alloys through electrolysis, by which sodium and calcium are deposited on the cathode and chlorine and carbon dioxide on the anode is a very efficient process for producing good-quality aluminum alloy castings. Degassing during the casting process can be carried out by employing harmonic vibrations; best results were obtained at 1031 ~ 1200 oscillations/minute and an amplitude of 0.8 mm. Precision investment casting, in which wax is replaced by inorganic salts with a low melting point and high solubility in water ensures greater precision and lower costs. Casting in ceramet molds ensures greater output since 4 - 5 ceramet molds would be sufficient for 2,500 cast iron and about 4,000 ~ 5,000 aluminum castings yearly. There are 1 figure, 1 table and 6

TITLE: On the possibility of reducing the duration of the melting process in producing electric steel by use of complex deoxidizers

PERIODICAL: Mashinostroene, no. 7, 1961, 22 - 26

TEXT: The article deals with reducing the melting process in producing electric steel by the use of complex deoxidizers. The purpose of the article is to review the existing possibilities in Bulgaria for applying complex deoxidizers and to explain the advantages of this method. Experiments in this direction were carried out at the "Stalin" metallurgischen kombinat (Metallurgical Combine) in Dimitrovgrad where the deoxidizers presently used in Bulgaria are produced. The final deoxidizing of steel by the use of silico-aluminum was carried out in the Durzhevsky mashinostroitelel'nyy zavod (State Machinery Plant) in Kolarovgrad. The presently used deoxidizers are shown in Table

D203/D302

1, while the proposed complex deoxidizers are listed in Table 2. Three experimental meltings designated 967, 977 and 983 were made. The results of the meltings compared with the results obtained in 1958, 1959 and 1960 are shown in tabulated form. The experiments showed that the present duration of the melting process in electric furnaces may be reduced by 11.6% if complex deoxidizers are used which, on the other hand, will permit an increase in the production of electric steel and a considerable decrease in production costs. There are 2 figures, 5 tables and one Soviet-bloc reference.

scions, prepared from the 1-5 nodes of an annual sprout, gave a lower percentage of first class grafted sets due to the peculiarity of the single varieties consisting of laying less viable shoots from the eyes of these nodes; a great yield of first class sets (67-85%) was obtained from the varieties Dimyat and Mavrud by preparation of the grape scions from the tenth node to the 20th and the lowest (30-57%) by preparation of scions from the 1-5 nodes; such a sharp difference was not observed in the Pamid variety. Whip grafting "on the rib" creates better conditions for a fuller, rounder growth of the graft with the rootstock and contributes to the increase of output of sets of the first variety by 4.5-4.7% in comparison with ordinary grafting.

TITLE: Effect of ethylxanthogenate on the content of sulphhydryl groups during experimental atherosclerosis ✓

SOURCE: Bulgarska akademiya na naukite. Doklady, v. 18, no. 10, 1965, 975-978

TOPIC TAGS: rabbit, cardiovascular system, drug effect, liver, blood chemistry, chemotherapy, preventive medicine, tissue physiology

ABSTRACT:  
There is fragmentary and contradictory information in the literature about changes in the content of tissue sulphhydryl groups upon atherosclerosis (A. S. Alekseyeva, Byull. eksperim. biol. i med., 41, 1956, No 2, 39-41; S. Oeriy, Natsional'naya farmatsevticheskaya konferentsiya, Rezyume soobshcheniy [National Pharmaceutical Conference, Summary of Reports], Bukharest, 1963, 146). The authors investigated these changes in the blood serum and liver of rabbits during experimental atherosclerosis and studied the effect of potassium and sodium ethylxanthogenates on the same animals. Two series of experiments were carried out with 56 male rabbits with therapeutic and prophylactic applications of the xanthogenate.

Card 1/2

ACC NR: AP6024755

Experimental atherosclerosis was provoked by the N. N. Anichkov's method. The article gives a detailed description of the experiments and presents the results in the form of numerous graphs. An analysis of the results shows a reduction in the content of sulphhydryl groups in the blood serum and in the liver of rabbits, and these data are not in agreement with those reported by A. S. Alekseyeva. The different results may be due to the use of different methods. The authors conclude that on the basis of existing results one cannot draw definite conclusions about the connection between the effect influencing the content of sulphhydryl groups and the antiatheromatous effect of the xanthogenates. This paper was presented by Corresponding Member BAN P. Nikolov on 6 July 1965. Orig. art. has: 4 figures. [Orig. art. in Eng.]

Title : Recording Spectrometer for Long-Wave Infrared Region

Orig Pub: Optika i spektroskopiya, 1956, 1, No 4, 507-515

Abstract: Description of a model of long-wave infrared spectrometer, assembled according to Pfund scheme. Radiation is directed from source to spherical mirror and provides an intermediate image within the plane of crystal modulator. Between spherical mirror and modulator is set up a unit with four crystal reflection filters. In the spectrometer are utilized two exchangeable echelles, with 12 and 6 lines per 1 mm, measuring 250x250 mm. Scanning of spectrum was effected by rotation of echelle. The spectra were recorded by means of optical, photoelectric, FEOU-17 amplifier, the output of which was directly connected to EPP-09 recording device, of 10 mv sensitivity
